

Eccentric Shaft Thermal Bypass Plug

Part No. 11800

INSTRUCTIONS

The Racing Beat aluminum plug replaces the stock thermal bypass pellet and spring on all 1986 and later (including RX-8) eccentric shafts.

To install, remove the original plug and spring units, then install the bypass plug into place with the threaded hole facing outwards. This threaded hole and the enclosed bolt is intended only for installation and removal of this plug unit. Once installed, retain the bolt (6mm x 1.0 thread pitch) for removal of the plug if required.
