

Miata Type II Nose Part No.57104

Installation Instructions

Before you start the installation process, please read through the following steps thoroughly.

Your Racing Beat Nose will require final sanding and possibly the application of a small amount of plastic filler to fully surface-finish the piece prior to painting. Always check product for fitment on the vehicle before painting, drilling or cutting. Improper installation may void your warranty. Parts which have been modified, prepped or painted cannot be returned. After the nose has been fitted and painted, proceed with the Installation Instructions.

Fitting and Painting Preparation

1. Remove the stock nose from the car. Pay close attention to the location from which each fastener is removed.
2. Remove the black reinforcements from the corners of the original nose and install them at the upper edge of the new nose (the lower attachment cannot be made due to the shape of the new nose).
3. Remove the (3) three upper edge brackets from the original nose and install them on the new nose. Ensure that the upper rubber edge is flush with the upper fiberglass edge (adjust as necessary).
4. Remove the brackets that attach the forward edge of the fenders to the nose from the stock nose and install them on the new nose.
5. Slip the new nose into position. Start the (4) four bolts under the hood to retain the nose. Gradually install all hardware. Gently lower and latch the hood, checking for fit. Adjust as necessary.
6. Check the (6) six fasteners inside the mouth for fit and alignment (use the supplied bolts/nuts/washers to attach the upper mouth).
7. Remove the (4) four parking lights from the original nose and insert them into the new nose. Before securing the lights in place, make allowance for the thickness of the paint.
8. After fitting, remove the nose and prepare for painting. Block sanding and body filler can be used to correct minor surface imperfections prior to painting.

Final Fitting

9. Re-install the finished nose - repeating steps 5 & 6.
